

THE PINSKE EDGE

#300

HOT RODS & HOT ROD TEMPLATE KIT

These HOT RODS are designed to upscale your countertop and protect it from a hot pan. The almond, black and white rods are powder coated and are made from steel. The satin chrome rods are made of stainless steel. The width of the hot rods varies between 7 ½" - 8 ½" dependent upon the style you are using. Installed rods should set about 3/32" of an inch above the countertop.

The HOT ROD TEMPLATE KIT includes the Template, 5/8" Template Guide, Depth Gauge and 1/4" Router Bit (#28-110).

Simply select the location on the countertop where you want to place the HOT RODS. Clamp the Template with regular clamps or use Pinske Power Grips. We recommend using a 1 ½ HP Plunge Router to route the grooves into the countertop. Set the depth of the groove using the depth gauge - it is not necessary to route the groove very deep. You can also install HOT RODS onto an existing countertop. We suggest that you DO NOT glue the rods onto a countertop – if they are loose, they can easily be removed for cleaning.
