

THE PINSKE EDGE

#31520

Sink and Cooktop Cutout

A ruler is etched into the guide. For your cutout dimensions, read the ruler off the inside of the aluminum plate where the thumbscrew is located. Set the template 1/8" larger than the cutout size you need. Use the inside radius corner for your sink cutouts. Install the four radius corners onto your template.

Rout using a 5/8" template guide and a 1/2" carbide bit.

Clamp the template using Power Grips or clamps.
