

THE PINSKE EDGE

#800/#810

Wavy Edge Router Base

The Wavy Edge Router Base is designed to give you a great seam everytime. Instead of joining two flat surfaces, use the Wavy Edge Router Base and Wavy Edge Router Bit to make two interlocking surfaces that fit snugly together.

- Seam edges align perfectly and don't slip
- A wavy surface seam is stronger because it has more adhesive area for better bonding

Here's how you do it: Rout one seam edge with one side of the stepped Router Base, then rotate the router 180° and rout the other seaming surface. This will give you automatic alignment of your deck surface.

You save time preparing the seams, and the automatic alignment means you won't do as much sanding to get a professional finish.
